EXAMINER
----------

ANYA, CHARLES E

ART UNIT	PAPER NUMBER
----------	--------------

2194

DATE MAILED: 06/26/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b> 10/044,213	<b>Applicant(s)</b> PARLA ET AL.	
	<b>Examiner</b> Charles E. Anya	<b>Art Unit</b> 2194	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 4/3/06.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) ☒ Claim(s) 1,2,4-20 and 22-42 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1,2,4-20 and 22-42 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**DETAILED ACTION**

1. Claims 1,2,4-20 and 22-42 are pending in this application.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. **Claims 1,2,4-13,19,20,22-31,37-40 and 42 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Pat. No. 6,167,448 to Hemphill et al. in view of U.S. Pat. No. 6,594,786 B1 to Connelly et al., and further in view of U.S. Pat. No. 6,789,257 B1 to MacPhail.**

4. As to claim 1, Hemphill teaches an event processing server, a method for processing events comprising the steps of: receiving an event message ("...ENM..." Col. 2 Ln. 10 - 17); the event message contains event registration information (EAS Files 210 Col. 10 Ln. 63 - 67, Col. 11 Ln. 1 - 10); identifying event information required to process event data based on the event message ("...locate a file..." Col. 2 Ln. 20 - 23, Col. 2 Ln. 43 - 48, Col. 8 Ln. 27 - 45).

Hemphill is silent with reference to product versions currently supported and a definition of a set of classes for said product, determining if existing event information is accessible to process the event data and if the existing event information is not accessible: (i) providing an event rejection indicating missing event information; and (ii) receiving the missing event information identified in the event rejection.

Connelly teaches product versions currently supported (Source Col. 8 Ln. 53 – 64, Col. 19 Ln. 27 – 31), determining if existing event information is accessible to process the event data and if the existing event information is not accessible; (i) providing an event rejection indicating missing event information (Col. 16 Ln. 57 - 67); and (ii) receiving the missing event information identified in the event rejection (“...Step 188...” Col.17 Ln. 10 - 16).

It would have been obvious to one of ordinary skill in the art at time the invention was made to combine the teachings of Connelly and Hemphill because the teaching of Connelly would improve the system of Hemphill by providing an agent-server recovery protocol for notifying a monitored system by a monitoring server (HA server) to correct an error event received therefrom (Connelly Col. 16 Ln. 57 - 63).

MacPhail teaches a definition of a set of classes for said product (figure 13 (Event Monitor Object Template 1320) Col. 18 Ln. 60 – 67, Col. 19 Ln. 1 – 12).

It would have been obvious to one of ordinary skill in the art at time the invention was made to combine the teachings of MacPhail, Connelly and Hemphill because the teaching of Connelly would improve the system of Connelly and Hemphill by providing a process for dynamically adjusting the event monitoring criteria thus allowing for fine

Art Unit: 2194

tuning the event monitor to the latest needs and capabilities of the computing environment (MacPhail Col. 6 Ln. 23 – 27).

5. As to claim 2, Hemphill teaches the method of claim 1 further comprising the steps of: selecting the event information based on the event data received', and generating an event output from the selected event information (Col. 2 Ln. 43 - 48).

6. As to claim 4, Hemphill teaches the method of claim 1 wherein the event message includes at least one unique identifier identifying the source of the event data ("...DEVICEID..." Col. 9 Ln. 32 - 50, Col. 10 Ln. 38 - 52).

7. As to claim 5, Hemphill teaches the method of claim 4 wherein the step of identifying event information required to process event data identifies the event information required based on the source of the event data (Col. 8 Ln. 43 - 45).

8. As to claim 6, Hemphill teaches the method of claim 1 wherein the event message includes at least one unique identifier identifying event information required to process the event data ("...locate a file..." Col. 2 Ln. 20 - 23, Col. 2 Ln. 43 - 48, Col. 8 Ln. 27 - 45).

9. As to claim 7, Connelly teaches the method of claim 1 wherein the steps of receiving comprise a step of accepting at least one of event registration information,

Art Unit: 2194

event data and event information mark-up language documents (Step 188 Col. 17 Ln. 14 - 16).

10. As to claim 8, Hemphill teaches the method of claim 1 wherein the event data includes network management data indicating a network management event associated with a source of the event data and wherein the step of receiving event data utilizes a hypertext transport protocol to receive the event data (Col. 10 Ln. 22 - 62).

11. As to claim 9, Connelly teaches the method of claim 1 wherein in the step of determining, if the existing event information is accessible, the method further comprises the steps of: (i) providing an event data destination; and (ii) receiving the event data via the event data destination (Step 190 Col. 17 Ln. 10 - 19, figure 8B Col. 18 Ln. 3 - 14).

12. As to claim 10, Connelly teaches the method of claim 9 wherein the steps of receiving comprise the steps of: reading first and second event data; processing the first and second event data to produce event output data that reflects a hierarchical event relationship between the first and second event data ("...out-of-sequence..." figure 7E Col. 17 Ln. 10 - 19, figure 88 Col. 18 Ln. 3 - 14).

13. As to claim 11, Connelly teaches the method of claim 1 further comprising the step of creating system component status records and wherein the step of receiving the

Art Unit: 2194

event data further includes the step of: updating a status of the system component status record based on the event data received (“...status change...” Col. 9 Ln. 65 - 67, Col. 10 Ln. 1 - 9).

14. As to claim 12, Hemphill the method of claim 1 wherein the event message contains event data (ENM 207 Col. 10 Ln. 22 - 62).

15. As to claims 13 and 31, see the rejection of claim 1 above.

16. As to claim 19, Hemphill teaches an event processing server for processing event messages comprising: a memory; a communications interface; a processor; and an interconnection mechanism coupling the memory, the processor and the communications interface (Server I/F 221 Col. 8 Ln. 1 - 14), wherein the processor is configured to: receive an event message (Event Processor Logic 222 (ENM 207) Col. 8 Ln. 15 - 26), the event message contains event registration information (EAS Files 210 Col. 10 Ln. 63 - 67, Col. 11 Ln. 1 - 10), identify event information required to process event data based on the event message (“...location pointer...” Col. 8 Ln. 27 - 45).

Hemphill is silent with reference to event registration information further including product versions currently supported and a definition of a set of classes for said product, determining if existing event information is accessible to process the event data and if the existing event information is not accessible; (i) provide an event rejection indicating

missing event information; and (ii) receive the missing event information identified in the event rejection.

Connelly teaches event registration information further including product versions currently supported (Source Col. 8 Ln. 53 – 64, Col. 19 Ln. 27 – 31), determining if existing event information is accessible to process the event data and if the existing event information is not accessible: (i) providing an event rejection indicating missing event information (Col. 16 Ln. 57 - 67); and (ii) receiving the missing event information identified in the event rejection “...Step 88...” Col.17 Ln. 10 - 16).

It would have been obvious to one of ordinary skill in the art at time the invention was made to combine the teachings of Connelly and Hemphill because the teaching of Connelly would improve the system of Hemphill by agent-server recovery protocol for notifying a monitored system by a monitoring server (HA server) to correct an error event received therefrom (Connelly Col. 16 Ln. 57 - 63).

MacPhail teaches a definition of a set of classes for said product (figure 13 (Event Monitor Object Template 1320) Col. 18 Ln. 60 – 67, Col. 19 Ln. 1 – 12).

It would have been obvious to one of ordinary skill in the art at time the invention was made to combine the teachings of MacPhail, Connelly and Hemphill because the teaching of Connelly would improve the system of Connelly and Hemphill by providing a process for dynamically adjusting the event monitoring criteria thus allowing for fine tuning the event monitor to the latest needs and capabilities of the computing environment (MacPhail Col. 6 Ln. 23 – 27).

Art Unit: 2194

17. As to claims 20 and 22 - 30, see the rejection of claims 2 and 4 - 12 respectively.

18. As to claims 37 and 38, see the rejection of claims 1 and 19 respectively.

19. As to claim 39, Hemphill teaches the method of claim 1, wherein said event registration information includes information that identifies a source of forthcoming event data as well as event information that the event processing server will require in order to be able to correctly process the forthcoming event data (EAS Files 210 Col. 10 Ln. 63 - 67, Col. 11 Ln. 1 - 67, Col. 12 Ln. 1 - 67).

20. As to claim 40, MacPhail teaches the event processing server of claim 1, wherein said definition of a set of classes includes, for each class, a name, a unique identifier, a description of the class, and definitions of dynamic variables for each class, said dynamic variables including properties and alarm attributes (figure 13 (Event Monitor Object Template 1320) Col. 18 Ln. 60 – 67, Col. 19 Ln. 1 – 12, "...trigger a disk error event..." Col. 19 Ln. 17 – 19: NOTE: although class name, unique identifier and description of the class are not explicitly described by MacPhail the template/class inherently includes these elements by providing member data/attributes/fields and template/class name).

21. As to claim 42, see the rejection of claim 40 above.

Art Unit: 2194

**22. Claims 14-16,18,32-34,36 and 41 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Pat. No. 6,779,004 B1 to Zintel in view of U.S. Pat. No. 6,594,786 B1 to Connelly et al., and further in view of U.S. Pat. No. 6,789,257 B1 to MacPhail.**

23. As to claim 14, Zintel teaches in an event generation client, a method for processing events comprising: sending event registration information including identifying event information required to process event data (RegisterupnpEventsource() Col. 32 Ln. 10 - 38, Col. 33 Ln. 50 - 67); detecting an event (SumbitupnppropertyEvent() Col. 33 Ln. 1 - 42); in response to detecting an event, creating event data (Col. 33 Ln. 24 - 25, Col. 34 Ln. 1 - 8); and sending the event data to an event processing server ("...subscribers..." Col. 33 Ln. 1 - 28, HUP Server 626 Col. 34 Ln. 15 - 25).

Zintel is silent with reference to event registration information further including product versions currently supported and a definition of a set of classes for said product.

24. Connelly teaches event registration information further including product versions currently supported (Source Col. 8 Ln. 53 – 64, Col. 19 Ln. 27 – 31).

It would have been obvious to one of ordinary skill in the art at time the invention was made to combine the teachings of Connelly and Hemphill because the teaching of Connelly would improve the system of Hemphill by agent-server recovery protocol for notifying a monitored system by a monitoring server (HA server) to correct an error event received therefrom (Connelly Col. 16 Ln. 57 - 63).

MacPhail teaches a definition of a set of classes for said product (figure 13 (Event Monitor Object Template 1320) Col. 18 Ln. 60 – 67, Col. 19 Ln. 1 – 12).

It would have been obvious to one of ordinary skill in the art at time the invention was made to combine the teachings of MacPhail, Connelly and Hemphill because the teaching of Connelly would improve the system of Connelly and Hemphill by providing a process for dynamically adjusting the event monitoring criteria thus allowing for fine tuning the event monitor to the latest needs and capabilities of the computing environment (MacPhail Col. 6 Ln. 23 – 27).

25. As to claim 15, Zintel teaches the method of claim 14 wherein the step of creating event data includes formatting the event data in a mark-up language format capable of transmission via a hyper-text transport protocol (Col. 29 Ln. 11 - 16, "...XML body..." Col. 33 Ln. 24 - 25).

26. As to claim 16, Zintel teaches the method of claim 14 wherein the step of sending event registration information, further comprises the step of: initiating a multiple of status checks of sources to produce status check information; and forwarding status check information in the event data to the event processing server ("...alive..." Col. 39 Ln 9 - 11).

27. As to claim 18, Connelly teaches the method of claim 14, further including the steps of: receiving an event rejection indicating missing event information from an event

Art Unit: 2194

process server; obtaining the missing information; and sending the missing evening information to the event processing server (“...Step 188...” Col.17 Ln. 10 - 16).

28. As to claims 32 - 34, see the rejection of claims 14 - 16 respectively.

29. As to claim 36, see the rejection of claim 18 above.

30. As to claim 41, MacPhail teaches the event generation client of claim 14, wherein said definition of a set of classes includes, for each class, a name, a unique identifier, a description of the class, and definitions of dynamic variables for each class, said dynamic variables including properties and alarm attributes (figure 13 (Event Monitor Object Template 1320) Col. 18 Ln. 60 – 67, Col. 19 Ln. 1 – 12, “...trigger a disk error event...” Col. 19 Ln. 17 – 19: NOTE: although class name, unique identifier and description of the class are not explicitly described by MacPhail the template/class inherently includes these elements by providing member data/attributes/fields and template/class name).

**31. Claims 17 and 35 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Pat. No. 6,779,004 B1 to Zintel in view of U.S. Pat. No. 6,594,786 B1 to Connelly et al., and further in view of U.S. Pat. No. 6,789,257 B1 to MacPhail as applied to claim 14 above, and further in view of U.S. Pat. No. 6,526,442 B1 to Stupek Jr. et al.**

32. As to claim 17, Zintel and Connelly are silent with reference to the method of claim 14 wherein the step of sending the event data further comprises the step of: periodically sending event data to the event processing server as confirmation of an operating communications channel.

33. Stupek teaches the method of claim 14 wherein the step of sending further comprises the step of: periodically sending event data to the event processing server as confirmation of an operating communications channel (Col. 2 Ln. 54 - 67).

34. It would have obvious to one of ordinary skill in the art at the time the invention was made to combine the teachings of Stupek, Connelly and Zintel because the teaching of Stupek would improve the system of Connelly and Zintel by providing plurality of notices indicative of the state of network to a management engine (Col. 2 Ln. 54 - 67).

35. As to claim 35, see the rejection of claim 17 above.

### ***Response to Arguments***

36. Applicant's arguments with respect to claims 1,2,4-20 and 22-42 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***
